SKILLS

ENGINES & IMPLEMENTATION

Unreal Engine 5 | Blueprint | C++ | State Trees

DESIGN

Technical Design | Gameplay Systems | Enemy AI Behaviour | Combat Design | RPG & Progression | Procedural Generation | Prototyping | Balancing | Design Documentation

TOOLS & COLLABORATION

GitHub | Visual Studio | Rider | Agile | Cross-discipline Collaboration | Playtesting & Iteration

EDUCATION

BSc (Hons) Computer Gameplay Design and Production

First-Class Honours

University of Staffordshire

PROFILE

First-Class BSc (Hons) graduate in Computer Gameplay Design and Production, focused on technical, gameplay and systems design in Unreal Engine 5. Designs and implements gameplay features using Blueprint and C++, with experience across enemy AI, combat, progression and procedural generation. Brings collaborative production experience from a 24-person team and current indie-studio work designing and implementing enemy behaviours with Unreal Engine 5.8 State Trees. Seeking a junior role in technical design, game design, systems design or gameplay design.

PROFESSIONAL EXPERIENCE

Volunteer Game Designer, Enemy AI Systems & Behaviour

SEP 2026 – PRESENT

Sleepy Bard Studios · Project Bacon: Ember Woods

- Designing and implementing enemy AI behaviours using State Trees in Unreal Engine 5.8.
- Translating gameplay requirements into implemented enemy behaviour systems for an active indie game project.

SELECTED PROJECTS

Get Scrapped!

DESIGN LEAD

24-person team · 8-week production · Unreal Engine 5

- Led a five-person design subgroup within a 24-person multidisciplinary team, aligning design and implementation to an eight-week production schedule.
- Maintained the live Game Design Document as a shared reference across design, art and engineering.
- Designed and implemented a Duplicate Part Stat Upgrade system in Blueprint, turning repeated item collection into randomized stat growth.

Hexpansion

SOLO TECHNICAL DESIGN

8 weeks · Unreal Engine 5

- Designed and built a hex-grid city-building prototype using Blueprint scripting.
- Created a runtime procedural terrain-generation system that produces a unique map each playthrough.
- Designed a gameplay loop connecting city expansion with army progression and built a modular grid-based foundation.

Interesting Mundane Tasks

SOLO FINAL-YEAR PROJECT

16 weeks · Unreal Engine 5

- Designed a job-simulation gameplay loop built around task prioritisation and competing resource constraints.
- Implemented task management, navigation and resource-management systems; used iterative playtesting to tune pacing and player decisions.

MMO Framework

ONGOING PERSONAL PROJECT

Unreal Engine 5

- Designing a single-player, MMO-inspired framework focused on class identity and RPG mechanics.
- Developing reusable combat, ability and progression systems; created the 'Battle Tactician' healer archetype around tactical support gameplay.
