ENKEL CIPA

Technical & Gameplay Designer | Unreal Engine 5 / Blueprint / C++

+44 7532 764365 | enkelcipa_@hotmail.com | Staffordshire, UK

Portfolio | LinkedIn | GitHub

PROFILE

First-class BSc (Hons) graduate in Computer Gameplay Design and Production (University of Staffordshire) specialising in systems-driven technical design in Unreal Engine 5. Builds gameplay features end-to-end using Blueprint and C++, from combat and progression systems to procedural generation. Proven design leadership on a 24-person multidisciplinary production and three shipped solo prototypes. Seeking Junior Technical Designer or Gameplay Designer roles building systemic, data-driven gameplay.

TECHNICAL SKILLS

Engines: Unreal Engine 5 (Blueprint Visual Scripting, C++)

Programming: C++, Blueprint

Tools: GitHub, Visual Studio, Rider

Design: Technical Design, Gameplay Systems, Combat Design, RPG & Progression Systems, Prototyping, Balancing, Game Design Documentation

Collaboration: Agile team workflows, design leadership, cross-discipline collaboration, playtesting & iteration

KEY PROJECTS

Get Scrapped! *— Design Lead | 24-person team | 8-week production | Unreal Engine 5*

- Led design direction for a 5-person design subgroup within a 24-person multidisciplinary team, keeping design and implementation aligned under an 8-week production deadline
- Maintained a live Game Design Document as the single source of truth across design, art, and engineering disciplines
- Designed and implemented a Duplicate Part Stat Upgrade system in Blueprint, turning repeated item collection into randomised stat growth to strengthen the core loop
- Partnered with engineering and art leads to keep new gameplay systems consistent with the core loop and design vision

Demo: Get Scrapped! — gameplay demo

Hexpansion *— Solo Technical Design Project | 8 weeks | Unreal Engine 5*

- Designed and built a hex-grid city-building prototype from scratch using Blueprint scripting
- Built a runtime procedural terrain generation system producing a unique map on every playthrough
- Designed a core gameplay loop linking city expansion to army progression systems
- Architected a modular, grid-based system to support future scaling without rework

Demo: Hexpansion — gameplay demo

Interesting Mundane Tasks *— Solo Final Year Project | 16 weeks | Unreal Engine 5*

- Designed a job-simulation gameplay system that reframes repetitive tasks as an engaging gameplay loop
- Built a task-management system requiring the player to prioritise under multiple competing resource constraints
- Implemented a core loop combining task execution, navigation, and resource management
- Ran iterative playtesting cycles to tune pacing, engagement, and the weight of player decisions

Demo: Interesting Mundane Tasks — gameplay demo

MMO Framework *— Ongoing Personal Project | Unreal Engine 5*

- Designing a single-player, MMO-inspired systems framework built around class identity and RPG mechanics
- Developed the healer archetype 'Battle Tactician', focused on tactical support gameplay
- Building reusable combat, ability, and RPG-style progression systems for reuse across future characters

Demo: MMO Framework — progress & devlog

EDUCATION

BSc (Hons) Computer Gameplay Design and Production — First Class Honours
University of Staffordshire
