Summary

Computer Gameplay Design and Production graduate from the University of Staffordshire (Expected July 2026), specialising in technical game design, gameplay systems, and RPG mechanics in Unreal Engine 5. Experienced in designing and implementing gameplay features using Blueprint scripting, building systemic gameplay mechanics, and collaborating within multidisciplinary teams. Seeking Junior Technical Designer or Gameplay Designer roles focused on systems-driven game development.

Technical Skills

Game Engines

- Unreal Engine 5
- Blueprint Visual Scripting

Development Tools

- GitHub
- Visual Studio
- Rider

Design

- Technical Design
- Gameplay Design
- Combat Design
- RPG Systems Design
- Progression Systems Design
- Prototyping
- Balancing
- Game Design Documentation

Additional Skills

- Agile Team Collaboration
- Design Leadership
- Playtesting & Iteration
- System Analysis

Education

BSc (Hons) Computer Gameplay Design and Production

University of Staffordshire

Expected Graduation: July 2026

Projects

Get Scrapped! | Design Lead | 24 person team | 8 Week Team Project | Unreal Engine 5

- Led design direction and coordinated a 5-person design subgroup within a 24-person multidisciplinary team
- Maintained a live Game Design Document to align design and implementation during rapid production
- Designed and implemented a Duplicate Part Stat Upgrade system rewarding repeated item collection with randomized stat growth
- Supported cross-discipline feature development ensuring gameplay systems aligned with core loop and design vision

Hexpansion | Solo Technical Design Project | 8 Weeks | Unreal Engine 5

- Designed and implemented a hex-grid city-building prototype using Blueprint scripting
- Built runtime procedural terrain generation producing unique maps per play session
- Developed core gameplay loop linking city expansion with army progression systems
- Created modular grid-based architecture to support scalable systems and future expansion

Project: Interesting Mundane Tasks | Solo Final Year Project | 16 Weeks | Unreal Engine 5

- Designed a job-simulation gameplay system focused on transforming repetitive tasks into engaging gameplay loops
- Built a task management system requiring prioritisation under multiple resource constraints
- Implemented core gameplay loop combining task execution, navigation, and resource management systems
- Conducted iterative playtesting to refine pacing, engagement, and decision-making impact

MMO Framework | Ongoing Personal Project

- Designing a single-player MMO-inspired system focused on class identity and RPG mechanics
- Developed initial healer archetype ("Battle Tactician") focused on tactical support gameplay
- Prototyped tank and DPS class structures to explore role balance and progression design
- Building reusable systems for combat, abilities, and RPG-style character progression
